

## CLOUD MANAGED NETWORKING

The Cisco Meraki portfolio of networking devices are centrally managed from the cloud. This feature-rich, easy-to-use cloud architecture enables customers to solve worrisome business problems and reduce operating costs.

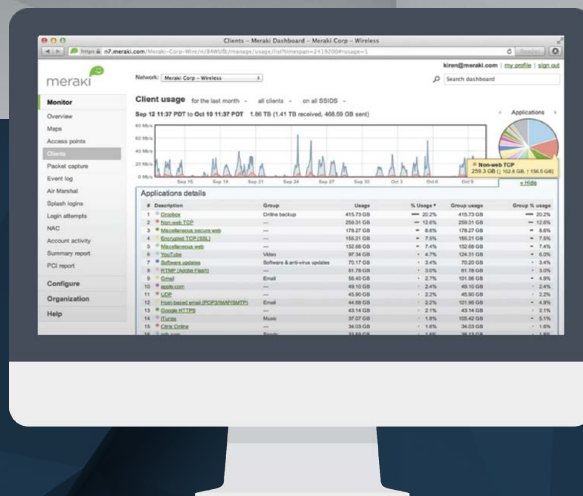

As a certified partner of Cisco Meraki, **Iris360** enables customers to leverage on-demand expertise with our dedicated team of Meraki qualified engineers. Our track record includes fully supporting single endpoint customers through to enterprise and multi-site deployments for our clients within Financial Services, Educational Institutions, and Hospitality industries.

## WHAT MAKES US DIFFERENT AND WHY CLIENTS CHOOSE IRIS360?

For many companies, the idea of an affordable Meraki solution brings to mind many other questions such as: "Is Meraki compatible with our current network infrastructure?; or what are the licensing implications with such a solution as our business grows and develops?" This is where **Iris360** can provide technical expertise to help. Our team has successfully introduced many clients to Meraki, and we offer the following complementary services to make sure the transition is completed with minimal impact on operations :

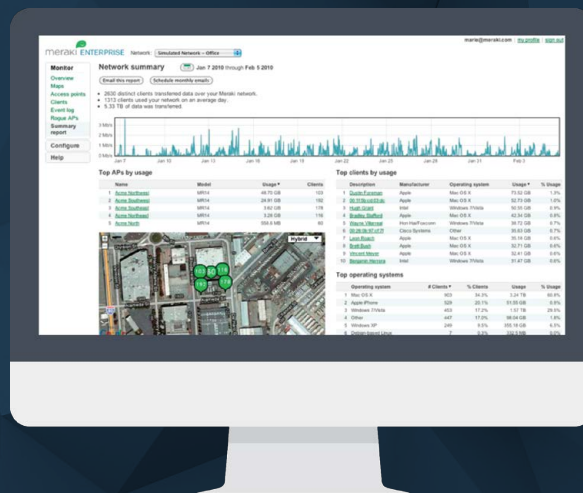

- ✓ **Customized Planning.**
- ✓ **Trial set-up and demonstration.**
- ✓ **Technical support & assistance.**

Unlike many other IT companies, **Iris360** also provides an in-house wireless capability ensuring that the deployment is carried out by experienced Cisco engineers from start to finish. Upon engagement, **Iris360** also provides in-house certified wireless experts that can conduct both physical and remote surveys.

## BENEFITS OF THE MERAKI SOLUTION

- ✓ A 'Single Pane of Glass' approach.
- ✓ High Capacity on-site Hardware, Centrally managed from the cloud.
- ✓ Enhanced Single intuitive browser based graphical Interface.
- ✓ Plug & Play deployment strategy without specialized Administration.
- ✓ Seamless Scalability that supports adding capacity on demand.
- ✓ Advance security features including WPA2: WIDS/WIPS, Group Policies and NAC.
- ✓ Lifetime Warranty and Advanced Replacement.

## HOW IT WORKS?

Reliable, high-performance Cisco Meraki wireless APs, switches, and security appliances are deployed in your campus or remote branches.

Cisco Meraki devices automatically connect to the Cisco Meraki cloud over SSL, register with your network, and download their configuration.

You have complete visibility and control over your entire network from the web. Configure thousands of devices, run diagnostics, or view reports with a few clicks.

Tasks such as RF optimization and VPN configuration are automated by the cloud, while firmware updates and application signatures are seamlessly deployed over the web.

## KEY BENEFITS

- ✓ Quick and easy to deploy – while retaining management of devices and the network remotely.
- ✓ Multiple SSIDs per device – dedicated networks for services, with assured bandwidth.
- ✓ Remote management – firewalls and traffic shaping per SSID means our guest network is secured, and can be made available to all our staff and visitors, without risk of excessive usage.
